

Installation de PrestaShop sous Wamp

Voici les étapes pour installer PrestaShop sous Wamp.

Téléchargement

Téléchargez PrestaShop sur le site officiel : <https://www.prestashop.com/>

Après avoir cliqué sur Créer ma boutique, téléchargez l'archive zip :

PrestaShop

Télécharger PrestaShop

Téléchargez gratuitement PrestaShop open source et profitez de sa nouvelle version 1.7.5.2

Télécharger

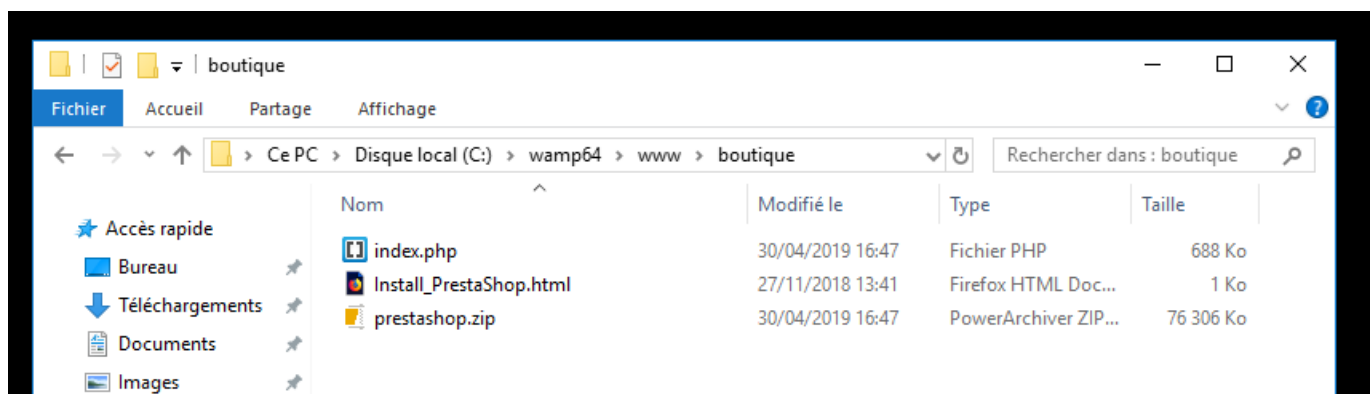

J'accepte les [Conditions Générales d'Utilisation](#) ainsi que la [Politique de protection des données](#).

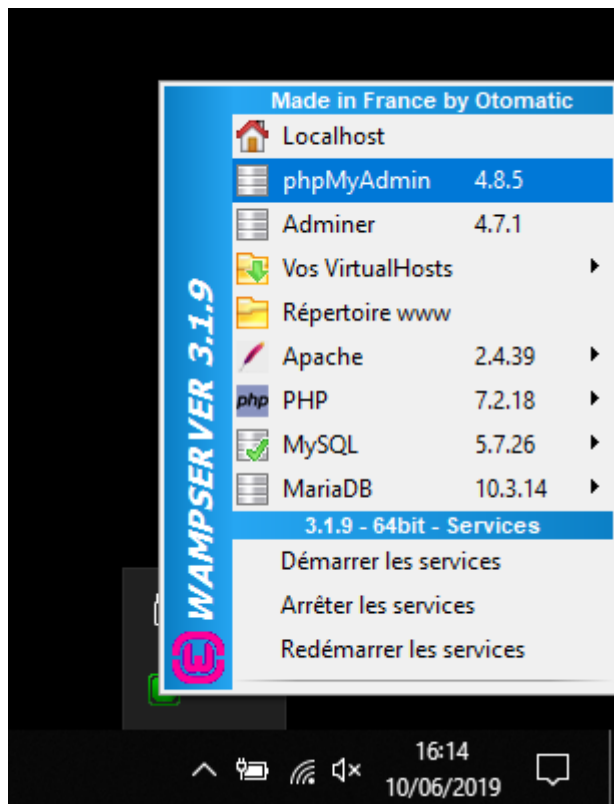

J'accepte de recevoir la Newsletter et les offres promotionnelles de PrestaShop.

[Tester la démo](#) | [Configuration requise](#) | [Versions précédentes](#) | [Traductions](#)

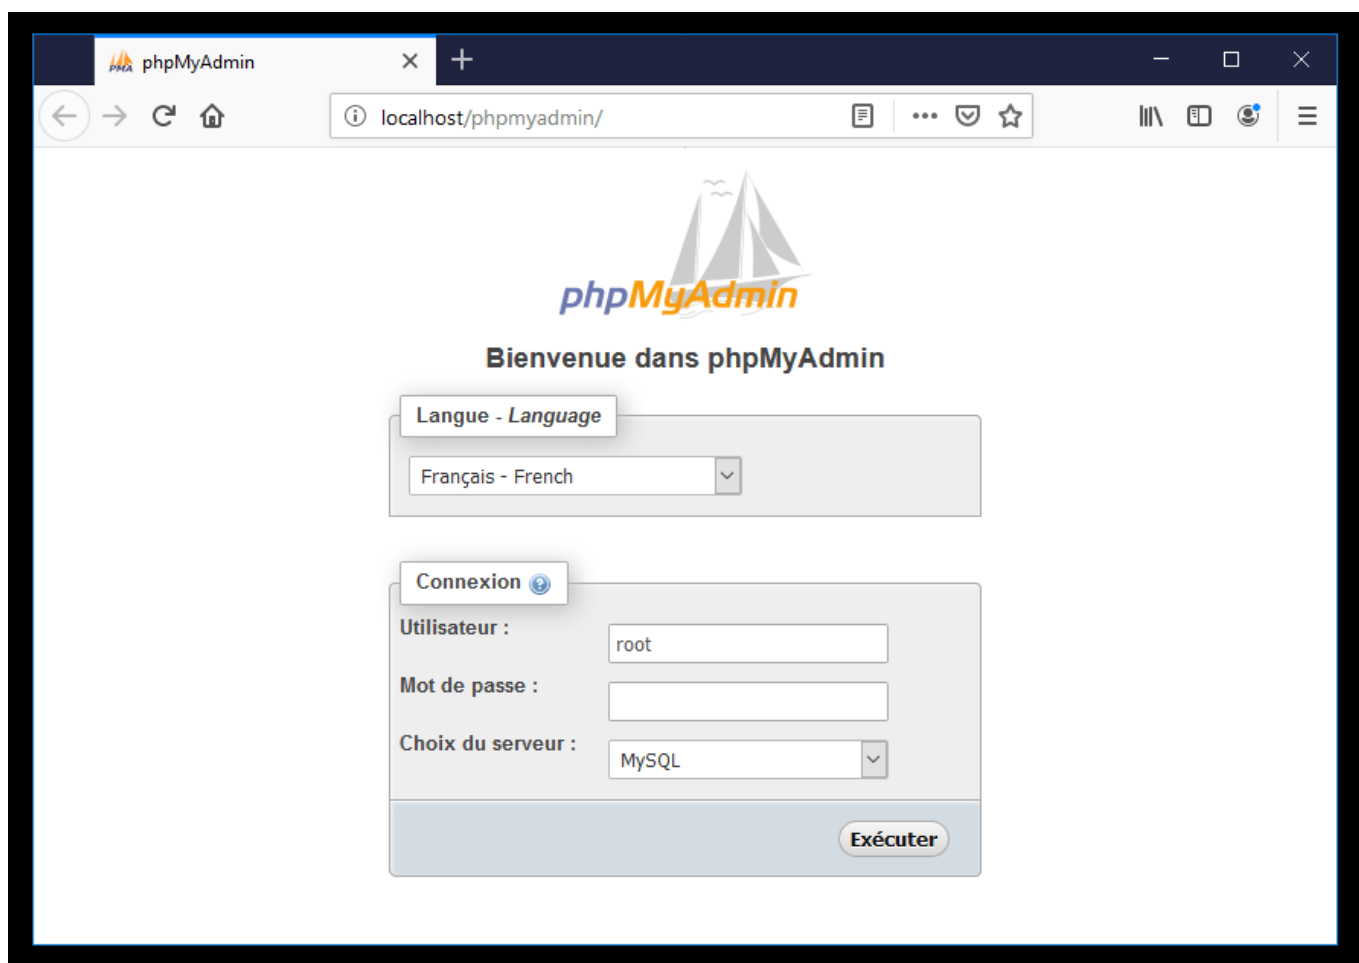

Extrayez l'archive dans un dossier nommé *boutique* que vous placerez dans le dossier *www* de Wamp.

Lancez Wamp puis allez dans phpMyAdmin pour créer la base de données de PrestaShop.

L'utilisateur MySQL est *root* et le mot passe est vide.

Créez une base de données nommée *boutique* avec l'interclassement *utf8_general_ci* :

localhost / MySQL | phpMyAdmin

localhost/phpmyadmin/server_databases.php?server=1

phpMyAdmin

Serveur courant : MySQL

Récentes Préférences

Nouvelle base de données

- information_schema
- mysql
- performance_schema
- sys

Base de données SQL État Comptes utilisateurs

Bases de données

Création d'une base de données :

boutique utf8_general_ci **Créer**

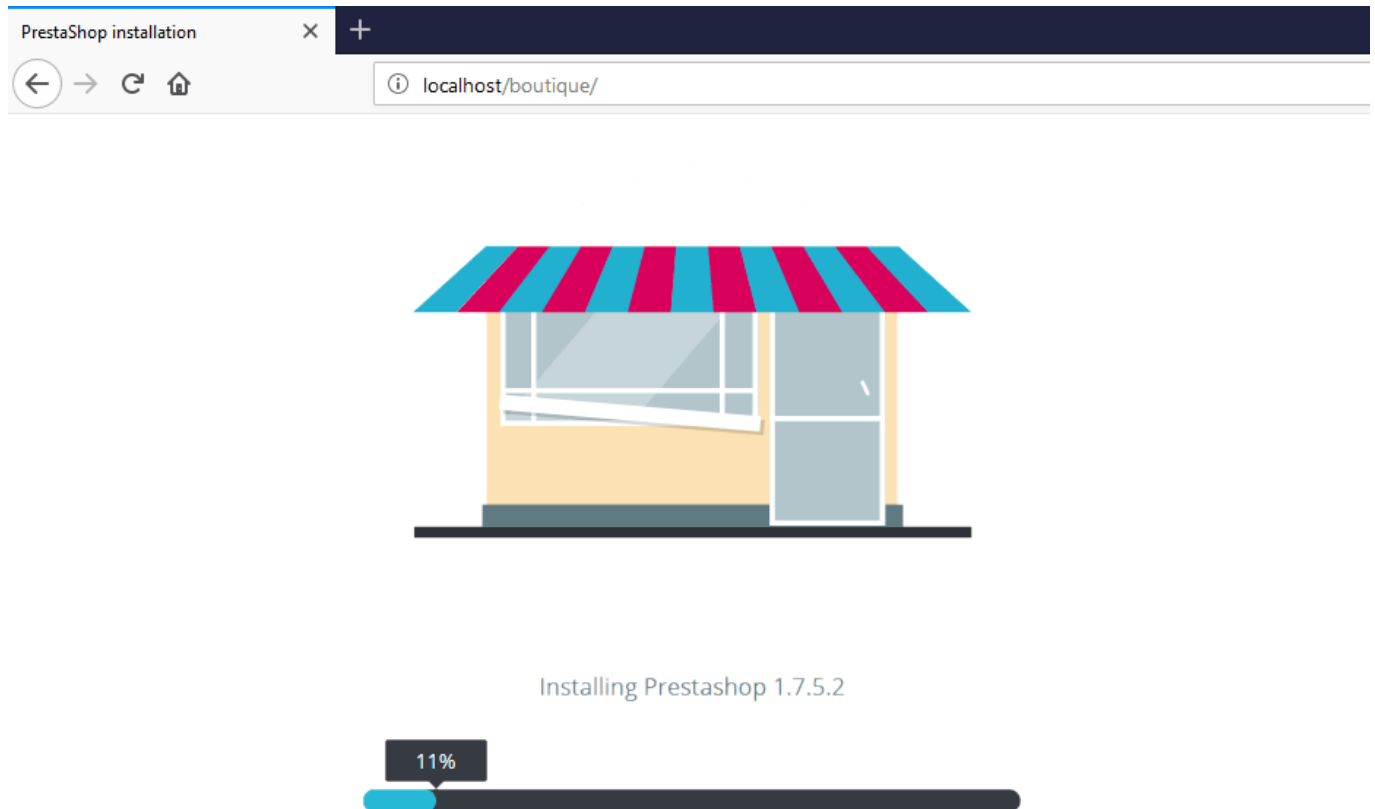

Base de données	Interclassement	Action
☐ information_schema	utf8_general_ci	Vérifier les privilèges
☐ mysql	latin1_swedish_ci	Vérifier les privilèges
☐ performance_schema	utf8_general_ci	Vérifier les privilèges
☐ sys	utf8_general_ci	Vérifier les privilèges
Total: 4	latin1_swedish_ci	

☐ Tout cocher Avec la sélection : [Supprimer](#)

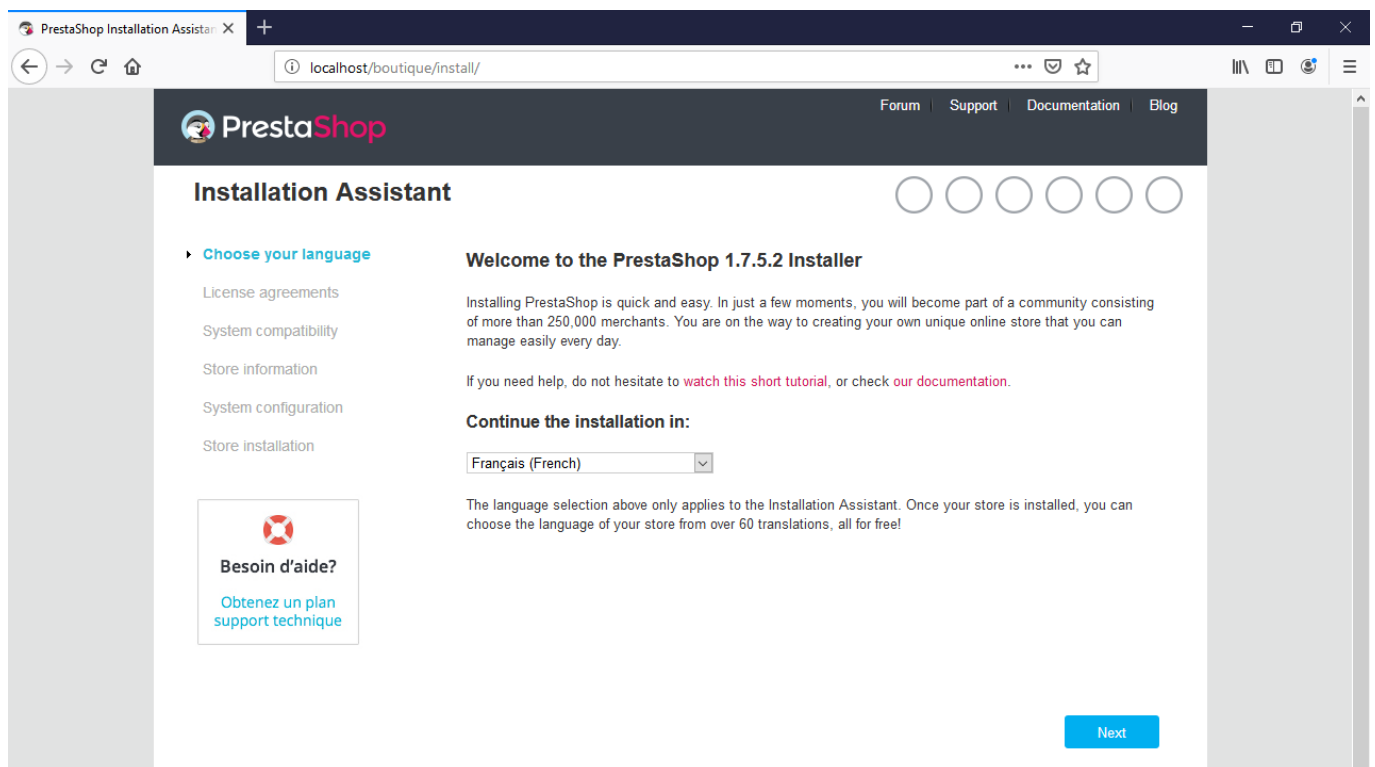

NB : l'activation des statistiques peut causer un trafic important entre le serveur Web

- [Activer les statistiques](#)

Une fois la base créée, ouvrez un navigateur puis allez sur **http://localhost/boutique**

PrestaShop prêt à l'emploi

We are currently checking PrestaShop compatibility with your system environment

If you have any questions, please visit our [documentation](#) and [community forum](#).

✖ Oops! Please correct the item(s) below, and then click "Refresh Information" to test the compatibility of your new system.

Required PHP parameters

cURL extension is not enabled

Setting "realpath_cache_size" to e.g. "5242880" or "5M" in php.ini* may improve performance on Windows significantly in some cases.

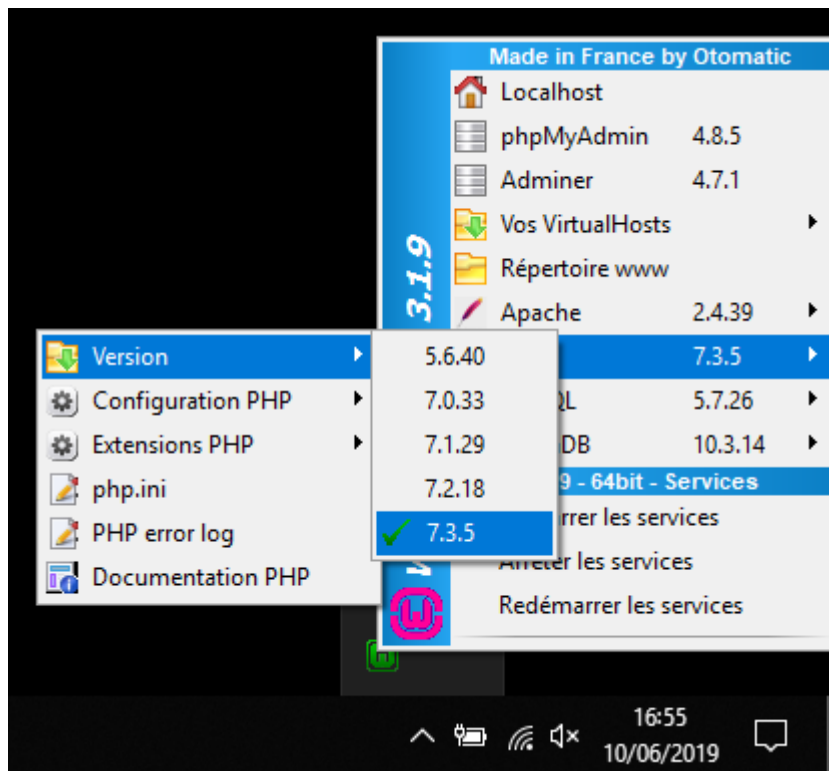

Refresh

Back

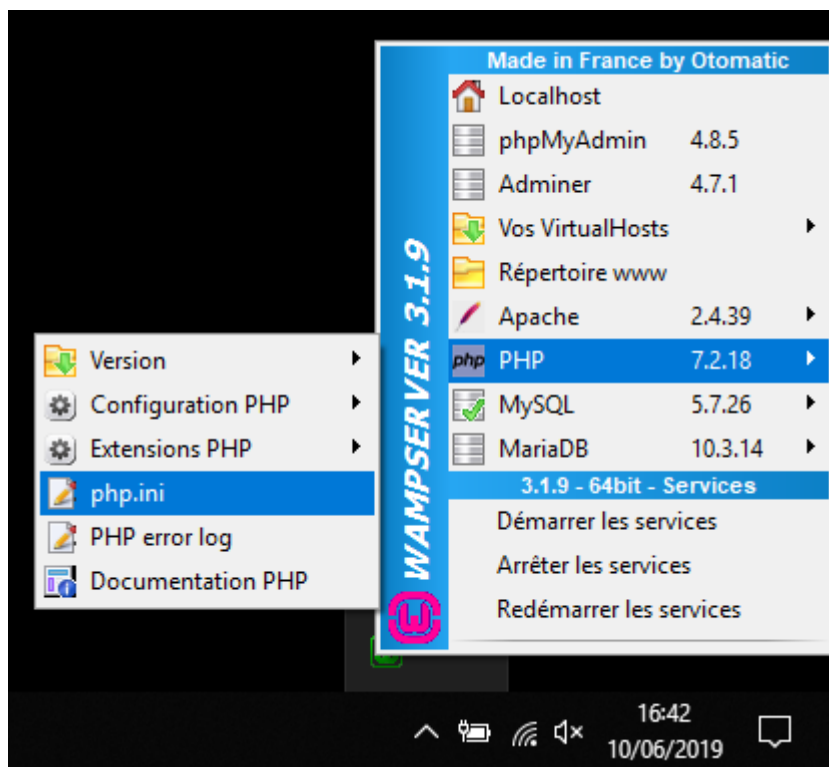

Next

Commençons par résoudre le problème de l'extension `cURL`. Si vous inspectez les paramètres du fichier `php.ini`, cette extension est bien activée. Pour résoudre le bug, il faut mettre une version plus récente de PHP. La version 7.3.5 fera l'affaire.

Rafraichissez la page d'installation de PrestaShop et vous verrez que PrestaShop sera quasiment satisfait.

Réglons maintenant le problème du `realpath_cache_size`. Éditez le fichier `php.ini` :

Retirez le point-virgule pour activer le paramètre et inscrivez la valeur 5M, ce qui correspond à 5 mégaoctets de cache pour accélérer le PHP. Malgré cela, PrestaShop demeurera très très lent.

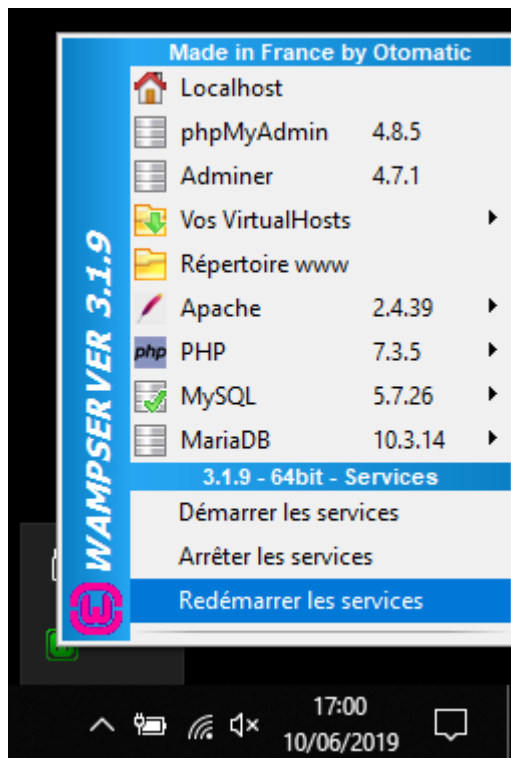

```
Fichier  Modifier  Rechercher  Affichage  Naviguer  Débuguer  Aide
+ c:/wamp64/bin/apache/apache2.4.39/bin/php.ini (Premiers pas) - Brackets

Fichiers de travail
+ php.ini

Premiers pas
+ screenshots
index.html
main.css

333 ; Determines the size of the realpath cache to be used by
334 ; PHP. This value should
335 ; be increased on systems where PHP opens many files to
336 ; reflect the quantity of
337 ; the file operations performed.
338 ; Note: if open_basedir is set, the cache is disabled
339 ; http://php.net/realpath-cache-size
340 realpath_cache_size = 5M
```

Toute modification du fichier *php.ini* implique de redémarrer les services.

A présent PrestaShop est satisfait :

If you need some assistance, you can [get tailored help](#) from our support team. The [official documentation](#) is also here to guide you.

Inscrivez ensuite les accès à la base de données *boutique*, sous Wamp, c'est toujours :

- Database server address : localhost
- Database login : root
- Database password : (vide)

The screenshot shows the 'Installation Assistant' interface for PrestaShop. The top navigation bar includes links for Forum, Support, Documentation, and Blog. The main heading is 'Installation Assistant', followed by a progress bar with six circles; the first four are green with checkmarks, and the last two are empty. On the left, a sidebar lists steps: 'Choose your language', 'License agreements', 'System compatibility', 'Store information', 'System configuration' (highlighted with a blue arrow), and 'Store installation'. Below this is a 'Besoin d'aide?' section with a link to 'Obtenez un plan support technique'. The main content area is titled 'Configure your database by filling out the following fields'. It includes a note: 'To use PrestaShop, you must create a database to collect all of your store's data-related activities. Please complete the fields below in order for PrestaShop to connect to your database.' The form fields are: 'Database server address' (localhost), 'Database name' (boutique), 'Database login' (root), 'Database password' (empty), and 'Tables prefix' (ps_). A blue button 'Test your database connection now!' is below the fields. A green box with a checkmark and the text 'Database is connected' is shown below the button. At the bottom, there are 'Back' and 'Next' buttons. A footer note states: 'If you need some assistance, you can get tailored help from our support team. The official documentation is also here to guide you.' The footer of the page includes 'Official forum | PrestaShop.com | Support | Documentation | Contact us | © 2007-2019'.

Next, on y est presque :

The screenshot shows the 'Installation Assistant' interface for PrestaShop, now at the 'Store Installation' step. The top navigation bar and progress bar (now with five green checkmarks) are consistent with the previous screen. The sidebar highlights 'Store installation' with a blue arrow. The main content area is titled 'Install Addons modules...' and features a progress bar showing '78%'. Below the progress bar is a list of tasks: 'Create file parameters', 'Create database tables', 'Create default shop and languages', 'Populate database tables', 'Configure shop information', 'Install demonstration data', 'Install modules', and 'Install Addons modules'. The 'Besoin d'aide?' section is partially visible at the bottom left.

C'est terminé !

Back Office

Manage your store using your Back Office. Manage your orders and customers, add modules, change themes, etc.

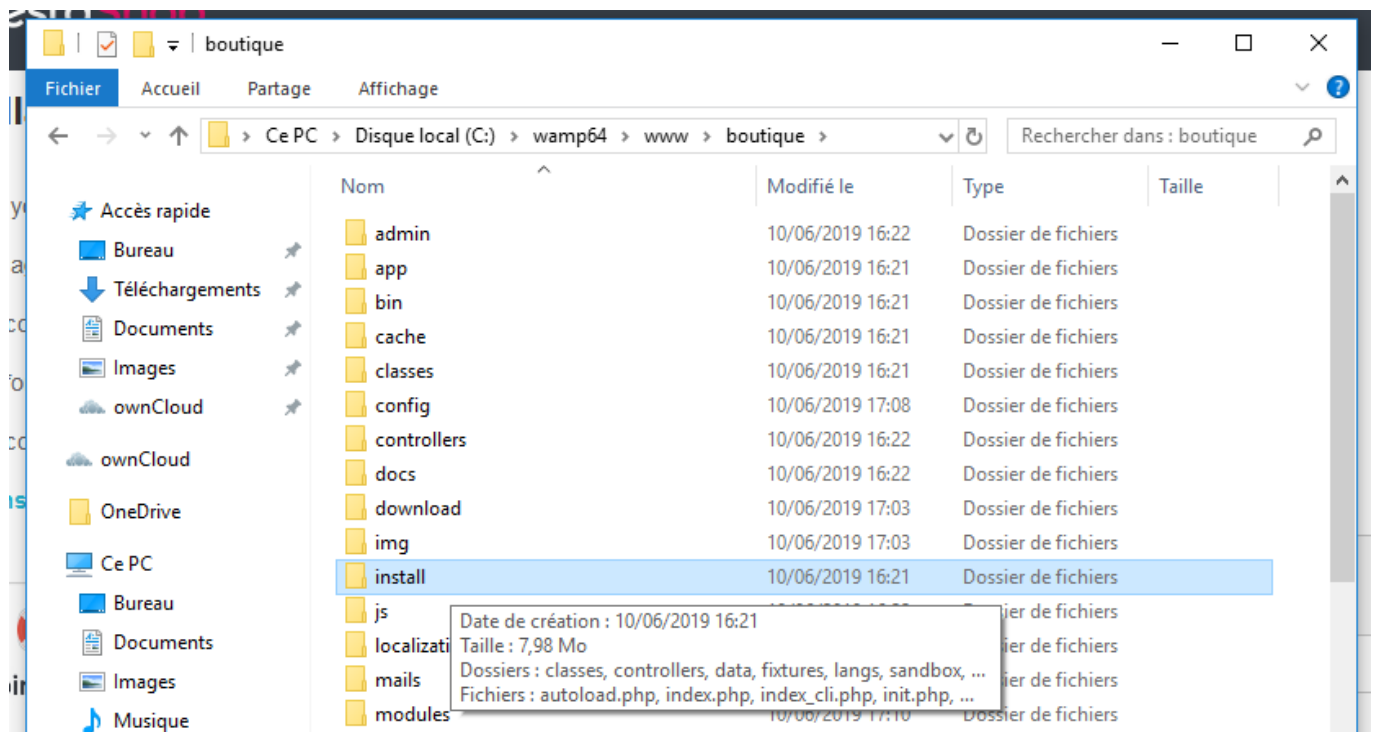

Manage your store

Front Office

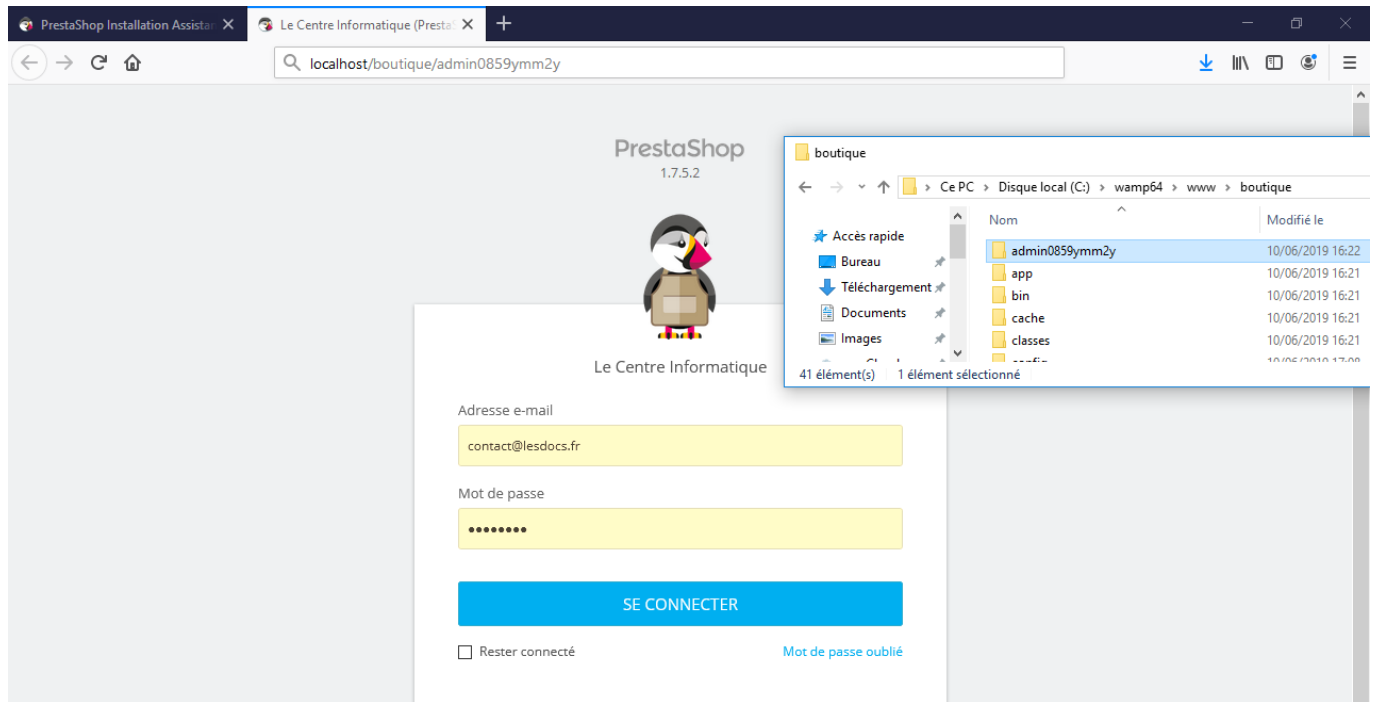

Discover your store as your future customers will see it!

Discover your store

Il est cependant conseillé de supprimer le dossier *install* qui a permit le déploiement de PrestaShop et qui constitue maintenant une faille de sécurité.

Une fois le dossier *install* supprimé, cliquez sur le bouton bleu *Manage your store*. L'URL d'administration contient un code de sécurité qui suit le mot *admin*. On peut le retrouver dans le dossier *boutique*.

Connectez-vous et admirez votre back-office :
